PROFESSIONAL OBJECTIVE

Product-driven Software Engineer specializing in scalable backend architectures, distributed microservices, and high-availability systems. Proven track record of owning end-to-end feature delivery, optimizing system latency by 25%, and engineering robust data pipelines that reliably support 50,000+ active users in fast-paced, high-impact environments.

TECHNICAL SKILLS

Backend: Node.js, Python, C# (.NET Core), Java, C++, RESTful APIs, Microservices

Frontend: React.js, Angular, JavaScript (ES6+), TypeScript, HTML5, CSS3

Cloud & DevOps: AWS (EC2, S3, DynamoDB), Docker, Kubernetes, CI/CD, Git, SAA Certification in Progress

Databases: PostgreSQL, MongoDB, SQL, NoSQL

Core Concepts: System Design, Object-Oriented Programming (OOP), Data Pipelines, Agile/Scrum

EXPERIENCE

Software Engineer Intern

Jun 2024 – Dec 2024

Tech Verse Solutions

India

- Architected and deployed distributed microservices, delivering real-time analytics for 50,000+ monthly users and exemplifying architecture design and system design principles to maintain high availability.
- Engineered highly scalable RESTful APIs using Python and Node.js, optimizing backend logic and data flow, which improved performance and reduced average system latency by 25%.
- Designed and implemented cost-efficient batch processing data pipelines on AWS cloud platforms (EC2, S3, DynamoDB), leveraging NoSQL storage, and reduced compute costs by 18%.

Fullstack Developer

Jun 2022 – Jul 2023

Coinmint

India (Remote)

- Engineered robust backend APIs and optimized server-side data retrieval strategies, significantly improving core platform performance and data processing speeds.
- Spearheaded the integration of critical third-party services through effective cross-functional collaboration with product and QA teams, while securing database-to-client data flows under strict security protocols.
- Accelerated overall development speed by 20% by building responsive, dynamic user interfaces with React and establishing seamless connections to complex backend architectures.

Fullstack Developer

Dec 2021 – Sep 2022

SpotLine

USA (Remote)

- Directed the end-to-end development of 5+ large-scale, high-traffic web applications, successfully driving a 20% increase in user engagement.
- Executed complete redesigns for 10+ websites, leveraging modern frameworks to improve system performance by 25% and mobile responsiveness by 30%.
- Conducted deep-dive performance tuning on Core Web Vitals, successfully reducing initial page load times by 30% across multiple client platforms.

Computer Teacher

Feb 2025 – Present

National Public Inter College

India

- Instructed 150+ students in Computer Science, guiding practical MS Office and foundational app development projects.

PROJECTS

High-Throughput Analytics Platform: Engineered a scalable data pipeline processing 10,000+ daily API events with zero timeouts, operating 40% faster than legacy systems.

Scalable E-Commerce Architecture: Architected a high-availability e-commerce platform, driving a 30% increase in user conversion rates by reducing checkout latency by 30%.

Machine Learning Predictive Pipeline: Developed an automated machine learning workflow supporting 10,000+ daily predictions, successfully reducing overall model evaluation time by 40%.

EDUCATION

Bachelor of Computer Science

Aug 2024

University of Windsor

Windsor, ON

CERTIFICATIONS

Machine Learning with Python Internship (Live Projects)

May 2021 – Jun 2021

MVARO & Verzeo

Certificate ID: 3719269074
