## SUMMARY

Full Stack Engineer with production experience in distributed backend systems, TypeScript/React frontends, and LLM integration. Shipped APIs serving 50,000+ users, built AI-powered tools on Groq and Llama 3.3, and optimised systems for 25% latency reduction. Looking to build developer-facing AI products at scale.

## TECHNICAL SKILLS

**Backend:** Node.js, Python, C# (.NET Core), Java, C++, RESTful APIs, Microservices  
**Frontend:** React.js, Angular, JavaScript (ES6+), TypeScript, HTML5, CSS3  
**Cloud & DevOps:** AWS (EC2, S3, DynamoDB), Docker, Kubernetes, CI/CD, Git, SAA Certification in Progress  
**Databases:** PostgreSQL, MongoDB, SQL, NoSQL  
**Core Concepts:** System Design, Object-Oriented Programming (OOP), Data Pipelines, Agile/Scrum

## EXPERIENCE

- |                                                                                                                                                                                                                       |                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|
| <b>Computer Teacher</b><br><i>National Public Inter College</i>                                                                                                                                                       | Feb 2025 – Present<br>India           |
| • Instructed 150+ students in Computer Science, guiding practical MS Office and foundational app development projects.                                                                                                |                                       |
| <b>Software Engineer Intern</b><br><i>Tech Verse Solutions</i>                                                                                                                                                        | Jun 2024 – Dec 2024<br>India          |
| • Architected and deployed distributed microservices powering real-time analytics for <b>50,000+ monthly users</b> while maintaining high availability.                                                               |                                       |
| • Engineered scalable RESTful APIs using <b>Python and Node.js</b> , improving backend performance and reducing average system latency by <b>25%</b> .                                                                |                                       |
| • Designed and implemented batch-processing data pipelines on <b>AWS (EC2, S3, DynamoDB)</b> , reducing compute costs by <b>18%</b> .                                                                                 |                                       |
| <b>Fullstack Developer</b><br><i>Coinmint(Crypto Trading Platform)</i>                                                                                                                                                | Jun 2022 – Jul 2023<br>India (Remote) |
| • Built a live crypto market dashboard in TypeScript and React consuming real-time WebSocket price feeds, cutting client-side rendering latency by 30% through virtualised list rendering and memoised state updates. |                                       |
| • Secured database-to-client data flows with JWT-based authentication and encrypted API transport, hardening the platform against credential exposure across all user-facing endpoints.                               |                                       |
| • Standardised backend API patterns and reusable React component libraries, reducing time-to-feature by 20% across a 3-person engineering team.                                                                       |                                       |
| <b>Fullstack Developer</b><br><i>SpotLine(US Digital Agency)</i>                                                                                                                                                      | Dec 2021 – Sep 2022<br>USA (Remote)   |
| • Delivered 5 client web applications end-to-end in React and Node.js, each from zero to production, improving average client user engagement by 20% measured via post-launch analytics.                              |                                       |
| • Cut initial page load times by 30% across multiple platforms by auditing Core Web Vitals, implementing code splitting, lazy loading, and CDN-level asset caching.                                                   |                                       |
| • Migrated 10+ legacy sites to TypeScript-based modern stacks, achieving 25% performance gains and 30% improvement in Lighthouse mobile scores.                                                                       |                                       |

## PROJECTS

- Real-time Collaborative Whiteboard:** Engineered a real-time collaborative drawing application using **Next.js**, **Yjs CRDT**, and **Socket.io**, delivering sub-second, conflict-free multi-user synchronization.
- Personal Portfolio & AI Code Mentor:** Architected an interactive **Next.js** portfolio integrating a custom streaming AI Code Mentor via **Groq (Llama 3.3)** and physics-based **Framer Motion** animations.
- High-Throughput Analytics Platform:** Built a highly available distributed data pipeline processing **10,000+ daily API events** with zero timeouts, achieving **40% faster performance** than legacy systems.
